

LECTURE 1: INTRODUCTION  
AUGUST 27<sup>TH</sup> 2019

# Computer Systems and Networks

---

Dr. Pallipuram (Section 1)  
(vpallipuramkrishnamani@pacific.edu)

Dr. Venkittaraman Vivek  
Pallipuram Krishnamani

---

# Evolution of Dr. Pallipuram's Name

---

Originally: Vivek Raman  
Father's Name: P.K.V.  
Raman

---

The Indian Government  
took my name as: Vivek  
P.K.V. Raman

---

The Indian Government  
took my name as:  
Venkittaraman Vivek  
Pallipuram Krishnamani

---

Clemson University took  
my name as: Vivek Kris.  
Pallipuram

---

As if it wasn't enough, a  
doctorate added 'Dr.' prefix  
and I became:

Dr. Venkittaraman Vivek  
Pallipuram Krishnamani

---

# My Background

---

Started as an Instrumentation and Control Engineer

Found real interest in computing

- Master's degree and Doctorate in Computer Engineering

Extensive experience in:

- High Performance Computing
  - Porting scientific applications on supercomputers with GPUs
  - Performance analysis (prediction of runtime without running an application) using probability theory
  - Cloud computing

# What are Past ECPE 170 students up to?

---

Your TA, David Samuel, is researching on Cloud systems with me

Cody Balos Fall 16 researched on HPC and is now at Lawrence Livermore as Systems Engineer

Mike Davis Sp 17 researched on GPU systems and is now at Lawrence Livermore as Software Engineer

Minh Pham Sp 18 is at LLNL as software developer

Dharak Fall 2017 completed co-op in Nvidia

# Our Course Goals

---

Looks familiar?

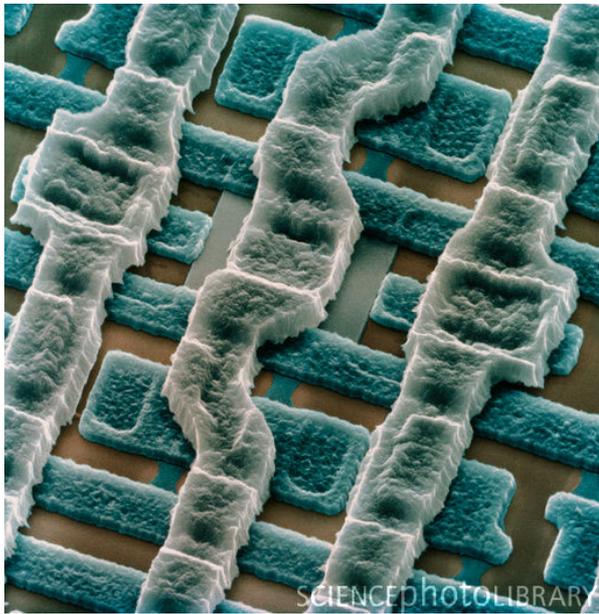

How does a computer system execute this game? Let's take a look at a bottom-up picture

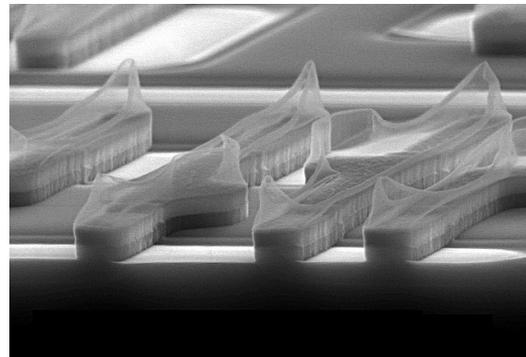

# Bottom Up Picture

---

Memory cell

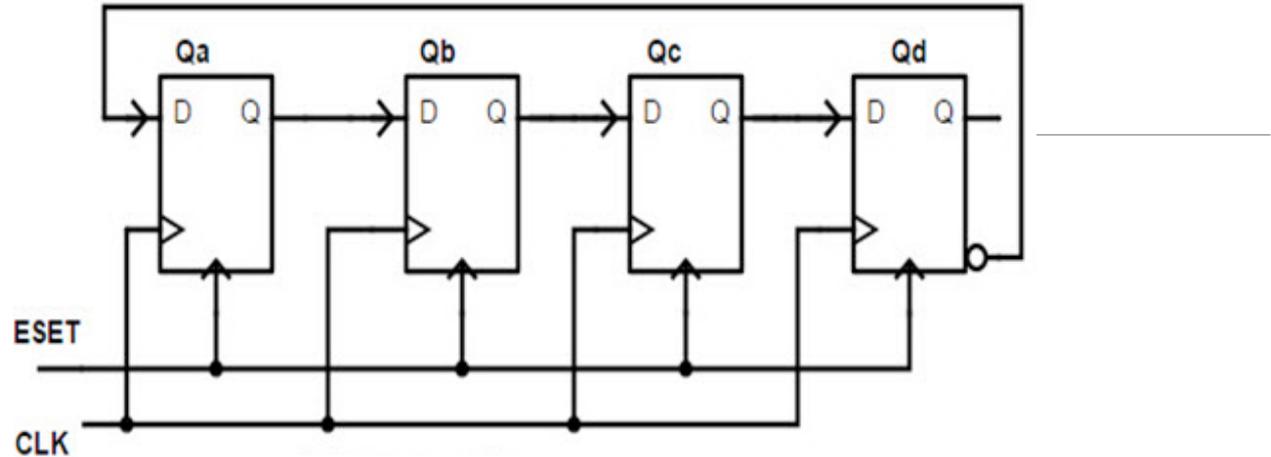

Transistor

Level 0: Electronics  
and Circuits (ECPE 41,  
131)

# Bottom Up Picture

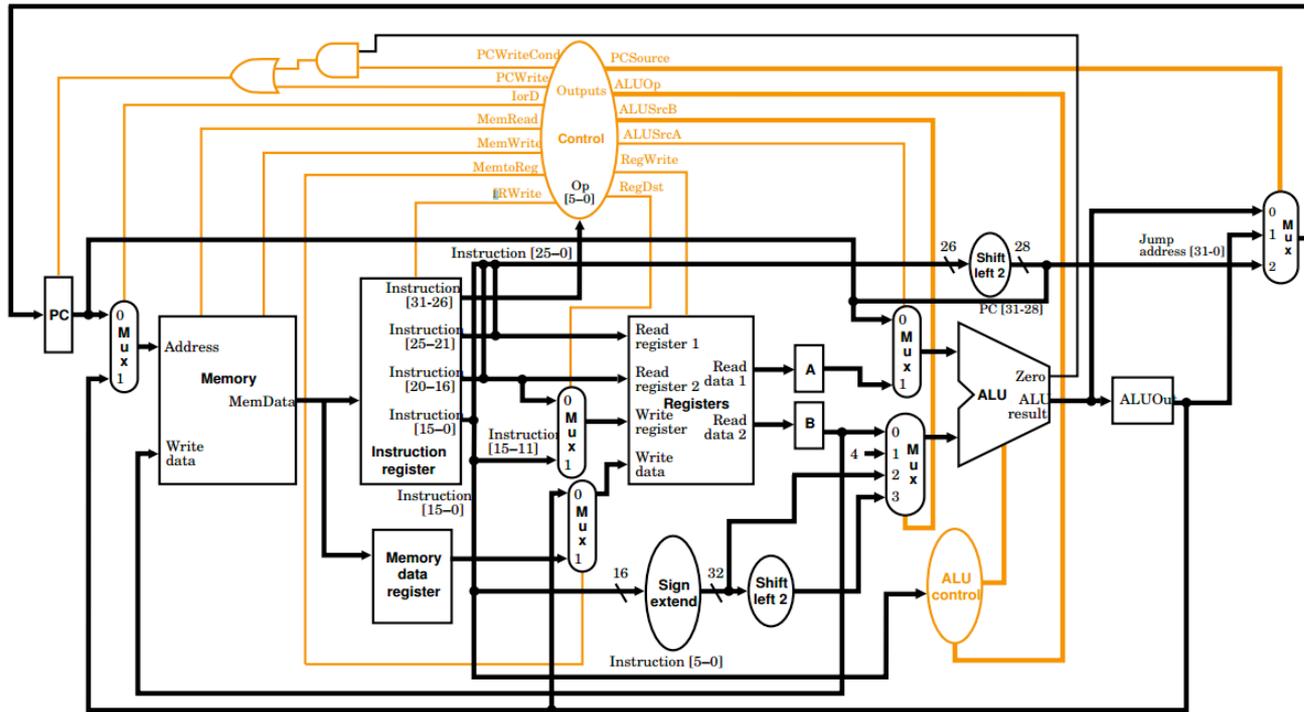

Level 1: Digital Design  
(ECPE 71, 174)

Level 0: Electronics  
and Circuits (ECPE 41,  
131)

# Bottom Up Picture

How about this one?

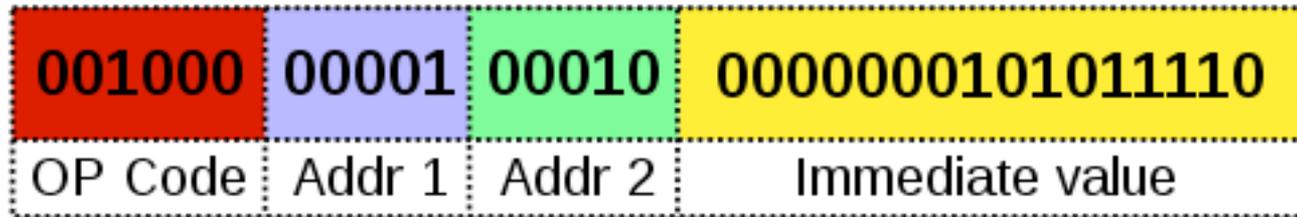

Level 2: Computer Organization (ECPE 173)

Level 1: Digital Design (ECPE 71, 174)

Level 0: Electronics and Circuits (ECPE 41, 131)

# MIPS32 Add Immediate Instruction

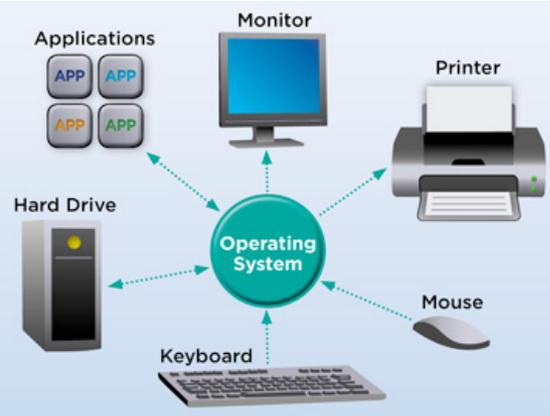

Equivalent mnemonic: **addi** \$r1, \$r2, 350

Level 3: Machine level (for ARM, Intel, etc.) ECPE 173

Level 2: Computer Organization  
(ECPE 173)

Level 1: Digital Design  
(ECPE 71, ECPE 174)

Level 0: Electronics and Circuits (ECPE 41, 131)

Level 4: Operating Systems level

Level 3: Machine level (ARM, Intel, etc.) ECPE 173

Level 2: Computer Organization  
(ECPE 173)

Level 1: Digital Design  
(ECPE 71, ECPE 174)

Level 0: Electronics and Circuits (ECPE 41, 131)

ECPE  
170

Level 7: User Application (e.g.: Age of Empires)

Level 6: High-Level Language (C, C++, etc.)

Level 5: Assembly programming level, human readable (MIPS Assembly) Assemblers translate them to machine lang.

Level 4: Operating Systems level

Level 3: Machine level (ARM, Intel, etc.) ECPE 173

Level 2: Computer Organization (ECPE 173)

Level 1: Digital Design (ECPE 71, ECPE 174)

Level 0: Electronics and Circuits (ECPE 41, 131)

# Course Goals

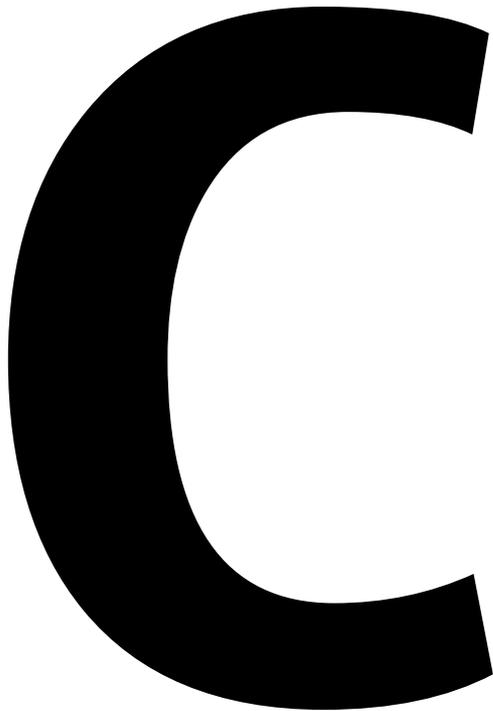

---

**What do you, as a programmer, need to know about the underlying system (software *and* hardware) to write more efficient code?**

- Role of the tools
  - Compiler, assembler, linker, profiler
- Role of the operating system and its efficient usage
- Assembly programming (using the CPU efficiently)
- Memory hierarchy and its impact on performance

# C Programming Language

---

A large, bold, black letter 'C' is positioned on the left side of the slide, partially overlapping the text to its right.

**Why not Python, Java, Ruby, Perl, PHP, ...?**

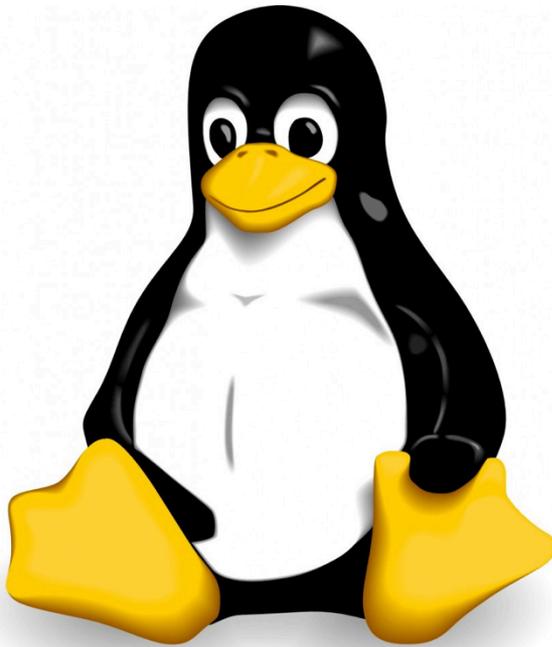

High-level languages (especially interpreted, managed code...) try to *hide* the underlying machine from you

ECPE 170 wants to *reveal* the underlying machine to you!

Bay area companies want more C

# Linux

---

**Course will be taught 100%  
in Linux**

**Feedback from co-op employers  
and graduates: “More Linux/Unix  
skills please!”**

**Software companies work with  
some version of Unix. Why?**

# Virtual Machine

---

**Course will be taught 100% from a virtual machine booting Linux that *you* install!**

*Couldn't you just give us remote access to a server someplace that is already configured?*

Yes, but...

- By installing it yourself you will have the skills to use it again in the future
- No mysterious "Professor Pallipuram" software configuration

# Version Control

---

# git

## Course will use version control!

- Only way to get lab code or turn in assignments

*Did you have to mandate VCS for ECPE 170?*

No, not really, but...

- Too many Pacific graduates were *avoiding* learning this on their own!
- **Feedback from co-op employers and graduates: “Only n00bs work without version control!”**
- Used everywhere: Source code of all kinds! (C++, Python, Matlab, VHDL/Verilog, ...)

# Course Mechanics

---

# Websites

---

Main website (syllabus, schedule)

- <http://ecs-network.serv.pacific.edu/ecpe-170>

Canvas website (gradebook)

- <http://canvas.pacific.edu>

Bitbucket.org (version control)

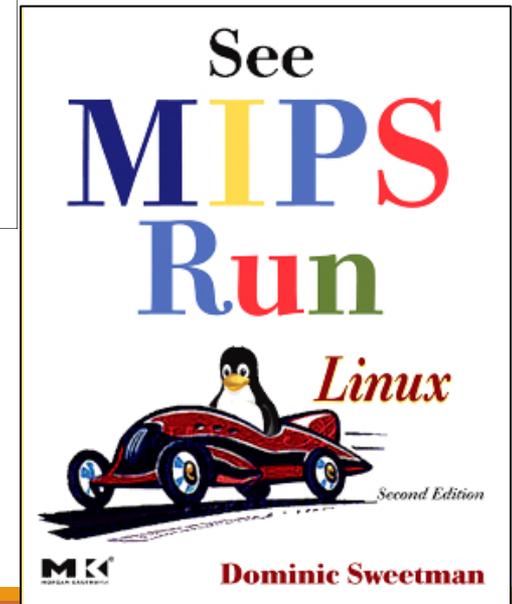

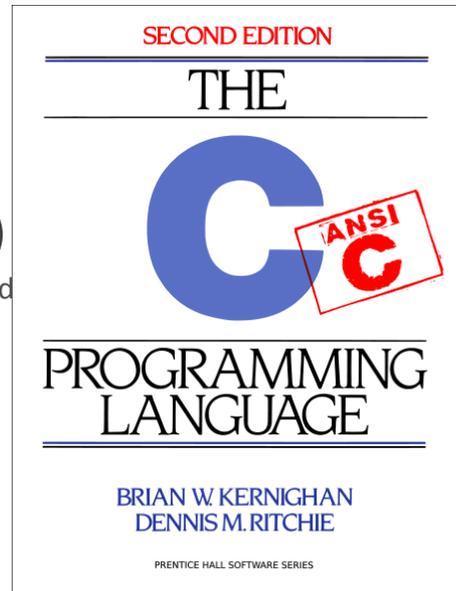

- <http://bitbucket.org>

# Textbook

## No official textbook

Optional reference books  
(useful for this class and beyond)

- The C Programming Language, 2<sup>nd</sup> Edition
- See MIPS Run, 2<sup>nd</sup> Edition

# Grading

---

## 30% - Exams

- 15% - Mid-term exam
- 15% - Final exam

## 65% - Labs

- Points assigned to each lab will vary based on complexity
- Each lab *begins* as an in-class activity
  - Unfinished work becomes homework/project
  - **Labs are large – assume “the usual” amount of homework/projects for a 4-credit class**
- **Tip: The best students last semester *started* the labs outside of class, and finished them as an in-class activity**
- **2% penalty per late day. No more than 7 late days**

## 5% - In-class participation

# Class Attendance – See schedule on the website

---

*Strong* attendance requirement may entail significant portion covered in the lecture and/or in-class participation problem

*Moderate* attendance requirement entails significant lab activity

Must be present for at least one hour of work

Skip no more than two consecutive moderate classes

*Recommended* attendance requirement entails that students have the option of performing their work outside of the class, as long as they are confident in performing the required task on their own.

# Office Hours

---

Office Hours: MON 11 AM to 1 PM; WED 11 AM to 1 PM;  
TH: 10 AM to 12 PM, and by e-mail appointment.

A successful software engineer often meets with her/his supervisor to stay on-track and successful!

# Honor Code

---

**All assignments are submitted individually**

## **Encouraged Activities**

- Collaborating with your classmates  
(asking questions, solving problems together)
- Searching for solutions online
  - Provided code copied does not exceed 25% of total assignment length
  - Provided you clearly **document this copy** in your source code and lab report
    - What did you copy? Where did it come from?

# Honor Code

---

## **Risky Activities**

- Having your classmates type on your computer or assignment file

## **Forbidden Activities**

- Copying someone's work verbatim (classmate or otherwise)
- Copying someone's work and obfuscating its source

**NOTE:** Your code will be checked for similarity with other submissions. More than 30% match on a non-trivial code is a red flag.

# Lab Topics

---

1. Linux
2. Version Control
3. C Programming
4. C Programming Project
5. Performance Measurement
6. Performance Optimization (compiler and programmer techniques)
7. Performance Optimization (Memory systems)
8. Network Programming 1 (Python)
9. Network Programming 2
10. Assembly Programming 1 (MIPS)
11. Assembly Programming 2
12. Assembly Programming 3

# Tips to Succeed in Detail

---

Start the project on-time. Even a tiny progress every day matters!

Attend all of the classes and perform in-class coding

Take bigger assignments ***very seriously!*** They separate A from B and C from F

Your goal per assignment is complete success. However, pay attention to rubrics and get partial credits

**MOST IMPORTANT:** Meet the professor regularly! Past students completed some labs in 1 hour sitting

# Lab 1 - Linux

---

# Homework

---

## Before the next class

**1. Skim “Virtual Machine Setup” tutorial instructions on website**

- [http://ecs-network.serv.pacific.edu/ecpe-170/tutorials/vm\\_setup](http://ecs-network.serv.pacific.edu/ecpe-170/tutorials/vm_setup)

**2. Decide on what computer system you want to use for this class**

**3. Download all software**

- Virtual machine installer (VMWare Player)
- Linux .iso image (installer) – 64-bit version

# Next Class - Linux Installfest

---

## Tutorial Day

### Objectives

- Follow the “Virtual Machine Setup” tutorial from website to install Linux
- Debug individual problems if needed
- Verify OS works
- **Email me screenshot as proof of success**

# Next Class - Linux Installfest

---

I want you to be comfortable as professionals working independently to solve problems

If you complete the “Virtual Machine Setup” tutorial independently (and email me a screenshot by Thursday morning), you don’t need to attend Thursday’s class. Sleep in!  
*(Or come help out)*

I will still be here to answer all questions and solve problems

# Next Class - Linux Installfest

---

**Warning: Don't skip class Thursday, and then tell me next Tuesday at Lab #1 that your OS doesn't work!**

# Lab 1 - Linux

---

## The first lab is next Tuesday

- Topic: Linux
- Crash course in command-line usage

## Lab 1: Pre-Lab

- Show me the working command prompt in your Linux install. Hopefully you will have this done by end-of-class Thursday
- **Pre-Lab is due at the start of the lab**

# Bring Laptop!

---

**Every class – bring your laptop!**

# Questions?

---
